The Mercantile Money Museum
6450 Cecil Avenue
St. Louis, MO 63105

Attention: Mr. Erick Newman

Dear Mr. Newman:

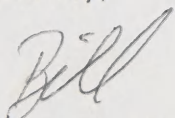

It was a pleasure talking to you last evening on the telephone. I am sorry that I did not have the time to talk longer with you, but as I mentioned, I was just walking out the door. I was quite interested in hearing of your museum and displays of money and money counting equipment. I hope to visit your museum at some time in the future. If you are ever travelling back through New England please give me a call in advance and we would love to have you visit our facility here. We do not do any manufacturing at this location, however, all of our corporate and administrative offices are here with quite an abundance and array of equipment.

I am enclosing several brochures showing and describing a variety of the Magner money processing equipment. I hope that you find these of interest and if you have any other questions, please feel free to give us a call.

As I mentioned on the phone, we have had a great pleasure getting to know our mutual friend, Mr. "Rapid" Robert Lewin. Bob is a great guy.

Once again it was very nice talking to you and I look forward to talking to you again in the future.

Sincerely,

William D. Magee

Middlefield, CT 06455

March 1, 1993

Dear Mr. Magee:

By your prompt transmission of your product material when you were leaving town I can appreciate your interest in the coin and paper money handling art. Thank you for it.

As I told you we operate a coin and paper money museum free for the public and a large numismatic library for helping in research. We also have many related items such as money cartoons, money scales, counterfeit detectors, money changers, coin acceptors, money counters, toy money, jetons, savings banks, money stereos, shredded money objects etc. You should come and see it. It is a major part of my life now that I have retired.

If you love antique cars you must love antique money mechanisms. Do you collect old sorters and changers and counters? As soon as we talk over what your interests are we may be able to share some fun.

I enclose a list of some of what we have along the lines of the items that you manufacture.

Rapid Robert lives only a few blocks from me when he is in St. Louis. He likes to get involved in anything fascinating.

When the opportunity permits write or call me and discuss our pleasant ailment.

Sincerely yours,

Eric P. Newman

MAGNER CORPORATION

The Art and

The Science

MAGNER _____

MAGNER CORPORATION

The four original founders of Magner Corporation are (from left to right, standing): Paul Brunner, William Magee, Ronald Brunner and (seated) Douglas Magee.

At Magner Corporation, we have mastered both the art and the science of money processing. The art is in the development of unique solutions to your unique problems. And the science is in creating and using a progressive technology to implement these solutions. We've been very successful in both areas, because we understand our customers' money processing needs, from simple to complex.

We also understand that money processing starts with some basic requirements. Money must be moved rapidly and counted accurately. The totals must be processed and the grand totals must be communicated where and when they are needed, and in a form convenient for the people using the information. While these requirements are fundamental, the parameters for satisfying them can change. And so can the money processing environment.

This is why we've developed a modular line of products that can work either as stand-alone units or in a systems configuration. Because we offer everything from baseline counters to state-of-the-art, high-speed networks, our products can grow as you grow. Magner gives you a single source for a variety of needs and applications.

And we give you something more. We provide nationwide — and worldwide — service and support for our products. Because we know that being there when you need us is more than an art or a science. It's our responsibility. And it's good business.

Products, Service, People

DOING BUSINESS WITH MAGNER

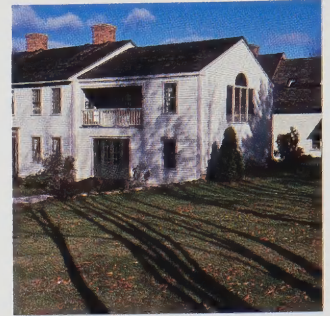

Quality products, nationwide and worldwide service, and experienced people. This is what you look for in a company. This is what you can expect from Magner Corporation.

Products. *We offer a full line of advanced equipment, starting with baseline coin and currency counters and progressing to sophisticated Cash Vault Management Systems. Our products reflect many years of customer experience as well as our commitment to exploring new money processing technology.*

Service. *When you buy a Magner product, you can expect a high return on your investment. Our worldwide service and support capabilities include maintenance, repair or replacement parts, and product support through our ongoing training programs and problem-solving assistance group.*

People. *Magner's diversified management team has literally grown up in the business. They bring a coordinated approach to the art of understanding customer requirements. And they all share a unique insight into the design and implementation of new systems and technology. Our team also understands the broad range of needs in the international market, and has tailored Magner systems and products to meet those needs.*

Integrity distinguishes our products, service and people from those of other companies. We have earned the loyalty of our customers by delivering quality products. We have earned their respect by solving their money management problems and by giving them individualized attention, regardless of their size. This is why it's good business to do business with Magner.

Coin Counters

CHANGE IS MORE THAN JUST MONEY

Change is innovation. And innovation is the force behind the coin counting part of our business.

The basic tasks of coin counting have not changed since coins came into being. They must be moved and counted, then the totals must be processed. What has changed, however, is the speed, accuracy and flexibility in performing these tasks. Design simplicity and electronics have worked together to bring about this change. Design simplicity has produced equipment with fewer moving parts and, therefore, fewer technical problems. It has also produced 'user friendly' equipment. The addition of electronics has added flexibility to the process by creating accurate bag stops and allowing direct access to stored information. And now, counting units can communicate with other equipment as part of a total system.

*In the computer industry, software is often well ahead of hardware. The same is true in the coin counting industry. For several years, we had the software to count 6,000 coins per minute — accurately. And we had the programs for variable bag stops and constant data flow into a computer. What we didn't have was the hardware. But now we do. Magner has brought hardware technology up to speed with the software. The result is a product that can count coins **ten times faster** than today's coin sorters in a counter-top machine.*

One more thing. Design simplicity and electronics have brought our counters into the international marketplace. Magner coin counters can handle the coins of virtually any nation. So pounds, francs and marks are sorted just as quickly and accurately as nickels and dimes.

Through technology, Magner is changing the way you think of change.

Controlling the physical movement of coins is one of the least understood arts in our industry. Over the last four decades, one individual has been responsible for the development of nearly every high-speed coin sorter on the U.S. Market. Magner is in the fortunate position of retaining this person to insure that we stay on the leading edge of coin sorting technology.

WHEN CURRENCY COUNTS

To stay current in our industry, a company must meet today's needs as well as anticipate tomorrow's. This philosophy is especially relevant to our currency counting product line.

Not very long ago, experts predicted that we would soon become a cashless society. As we now know, this prediction was slightly premature. In fact, the amount of United States currency in circulation has more than doubled in the last ten years. Accordingly, the demand for speed in counting and reporting has increased. And so, for money processing equipment, the challenge is to handle more volume in less time — while solving the problems and meeting the needs of your money processing environment.

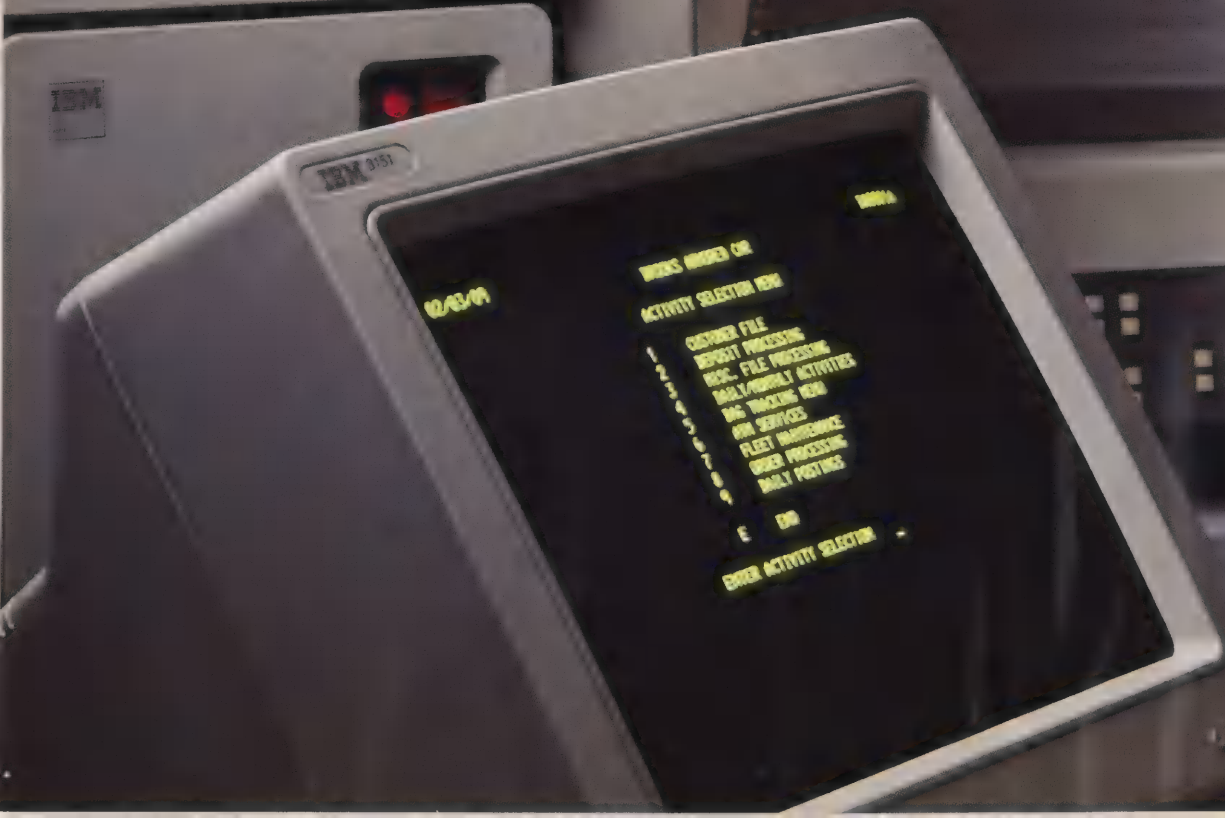

For example, you want reliability, accuracy and minimum downtime whether you own the simplest currency counter or the most sophisticated cash settlement system. You want the ability to recognize denominations and find suspected counterfeit bills. You want to buy only what you need right now, yet maintain the flexibility to upgrade your system without replacing what you already have. You may want to tie your currency machine into existing data banks to speed up reporting. And finally, you want your equipment to be compatible with the leading data processing systems.

Magner will work with you to satisfy these requirements and more. We understand your problems and we have the solutions. This is how we've become an industry leader.

Marketing

At Magner, our most important marketing activity is listening. We listen to our customers when they tell us what they need. This results in product development that responds to real needs with competitively priced equipment and systems.

A SYSTEMS APPROACH TO MONEY PROCESSING

Software Development

Our customers range from the largest international banks to the smallest retailers. This makes a compelling statement about our product line. Because today's local grocery store may be tomorrow's mega-market, money processing equipment and systems must be flexible — and expandable. This is why Magner stand-alone products are designed for a smooth transition into our systems. When you buy a Magner product, you get the tool that best suits your current applications. You also take the first step towards an integrated money processing system.

Cash Vault Management. *Our Money Manager System developed with Brooks Armored Car, is a prime example of Magner flexibility and expertise in cash vault management. The system is modular, allowing you to add and coordinate functions as you need them. You can first automate basic deposit transactions, so envelope deposits, night bag deposits and all cash settlement functions are handled with ease. Later, cash and supply orders from your customers and branches can be taken over the telephone through the system's computerized voice response unit. Finally, when you implement the Bag Tracking System and the Inventory Module, you will have the most complete vault system available.*

With the Money Manager System, teller terminals are networked for greater productivity and efficiency. This capability brings report generation to new levels. Besides automating your difficult and time-consuming spreadsheets, the system can produce reports customized to your specifications. And you can have those reports that were simply impossible to produce before. In fact, it's this data gathering and coordinating capability that makes the Money Manager System such a powerful tool.

All of our customers share the same objective, to control the accountability of money. To do this effectively in terms of your own individual requirements, you need the help of professional systems analysts. Magner gives you access to these people. Through them, you can better understand how to solve money processing problems through equipment integration and computer interfaces.

Cash Settlement Terminals

DECLARED CASH : \$ 123456.00

PAPER FEED
REPEAT ENTRY
CMD
CLEAR
ENTER
YES
NO
MULTI DEPOSIT
END

With the system, you can obtain accurate, reliable data on your cash position — locally, nationwide and worldwide. And when you have this kind of instant vault accountability, you can make more effective cash decisions.

Deposit Processing. *For smaller vault operations whose money processing needs are concentrated on deposit consolidation, we have PC-based systems that receive deposit data from your individual terminals and consolidate and translate the information into meaningful management reports. These systems can help you improve productivity.*

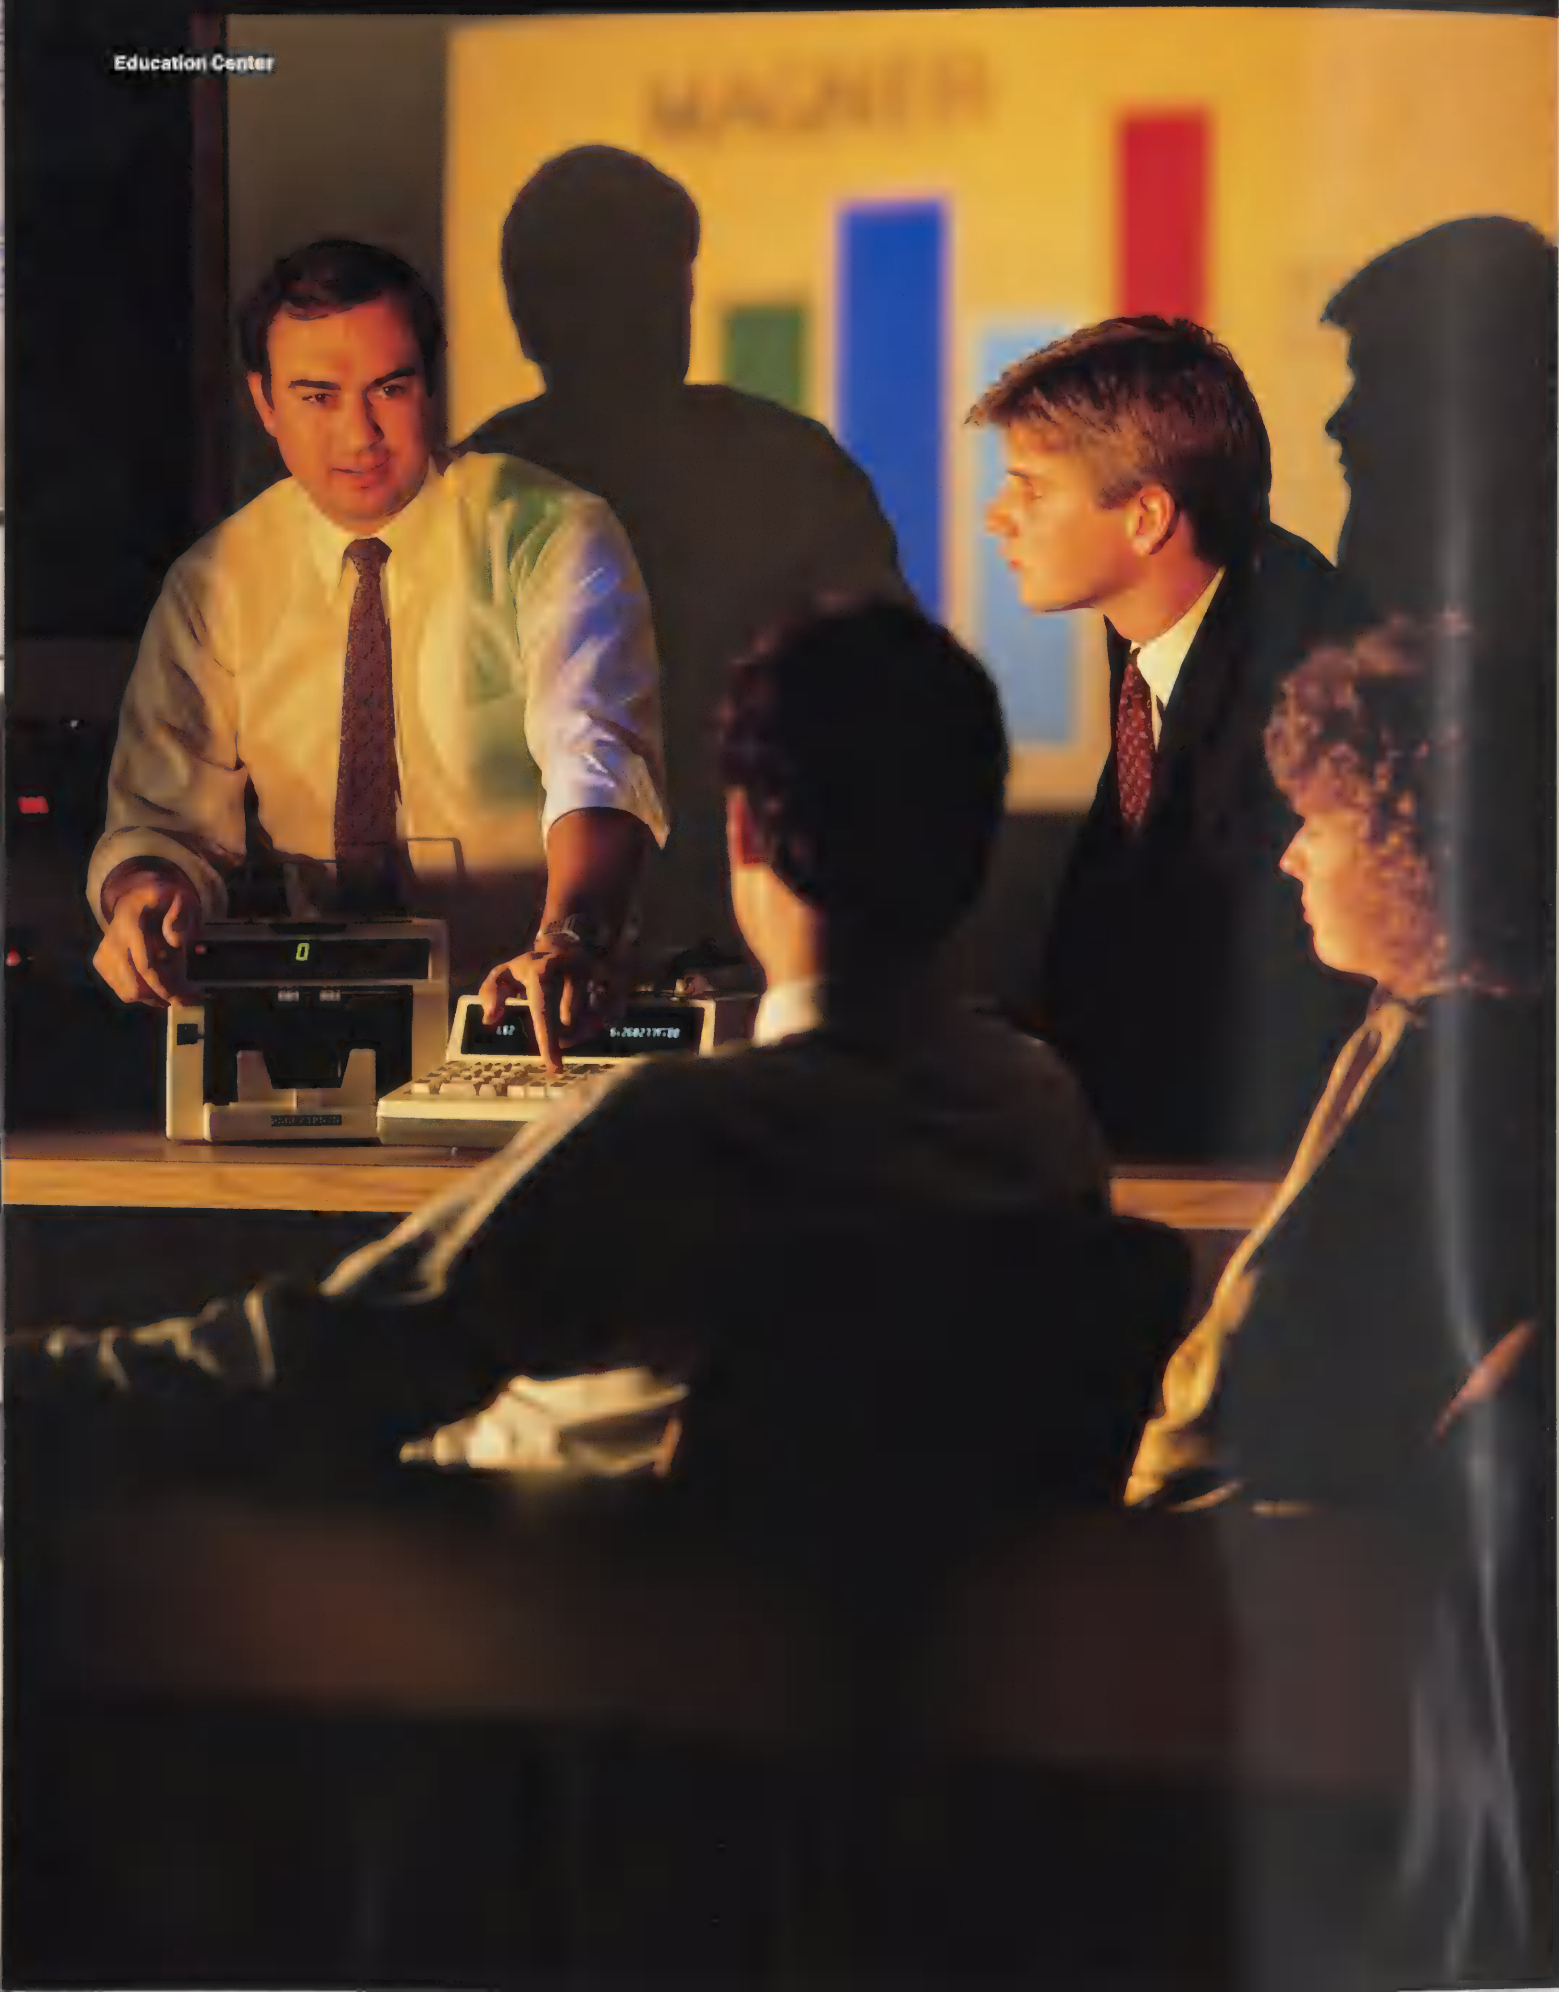

Cash Settlement. *At Magner, we've developed several levels of cash settlement terminals, each designed for a different set of application needs. Yet they all share the common goal of helping you improve productivity and efficiency.*

Because we recognize that cash settlement is often the front line of a more complex money processing application, our terminals are designed to support additional devices and track a variety of media types. We've also developed PC-based systems that address a larger group of cash settlement functions and provides users with communications capabilities.

At Magner, automation isn't an add-on. It's an integral part of our operating philosophy and practices. Our systems approach ties our products together and keeps them relevant to the varied and changing needs of the business world. We've made a promise — both to ourselves and to our customers — that we will continually look for new opportunities to automate money processing.

In the domestic market, recognizing, satisfying and supporting the specific requirements of our nationwide major accounts often takes a team of money processing professionals skilled in dealing with coin and currency problems. The same is true when working in the international market, where we are also demonstrating our ability to master the art of adapting our coin and currency counting products to meet a diverse range of international requirements.

IN THE SERVICE OF MONEY PROCESSING

Because we are growing, our product capabilities will change and our approach to solving customer problems will evolve as new technologies and products become available.

But one thing will remain constant, and that is our determination to be number one in customer support.

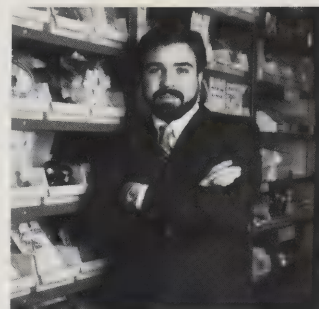

We are fully aware that if you have an equipment problem, it is not features, nor design that matter, but

service.

Magner's worldwide service and product support network stands behind all our products. From helping you design a total money processing system to servicing our most basic coin counters, we're there when you need us. And our dedicated service companies are on call wherever and whenever you need them.

A natural outgrowth of our commitment to service excellence is our Education Center in Middlefield, Connecticut. Here, we maintain a complete installation of all our products in order to provide both our customers and our representatives with in-depth training. For our representatives, a special emphasis is placed on customer applications. As a result, we've taken the lead in money processing applications. Magner people have the knowledge and versatility to match basic equipment to basic needs as well as to custom design software packages for complex information processing applications.

Technical Support

In our industry, what happens after the sale is often more important than what happens before. Services such as ongoing software support, on-site assistance and parts availability are more important to our customers than the actual equipment purchase. Our dedication to this type of support is just one of the ways we insure that your investment in Magner pays long-term Marketing dividends.

PUTTING IT TO WORK FOR YOU

This is why we say that Magner has mastered the art and science of money processing. We know our business, in terms of both technology and the application of that technology to real problems and situations. Let us put our art and science to work for you.

The Art and the Science

PUTTING IT TO WORK FOR YOU

This is why we say that Magner has mastered the science of money processing. We know this in terms of both technology and the application of technology to real problems and solutions and science to work for you.

Perfecting the art and science of money processing.

MAGNER

Specifications:

Models 55/55CF/70CF

Counting Speeds: 600/1000/1300 per minute (Approx.)

Display: 4 Digit LED (Model 70, 6-Digits)

Document Size Limits: 2" x 4" to 4" x 7"

Hopper Capacity: 300 notes

Stacker Capacity: 150 notes

Batching: *Direct Access standard Batches: 5, 10, 25, 50, 100, OFF, *Variable from 1 to 999 (except Model 70)

Error Detection: Jam, half note, double note, chain note, hopper jam, overcount, short count, door open, CF (Option).

Document Feed

Mechanism: Intermittent Roller Friction Type

Dimensions: 10" (W) x 7.5" (D) x 9" (H)

Net Weight: 15 lbs. (16 lbs. boxed)

Power Source: 110V 60 Hz/220V 50 Hz Selectable

Counterfeit

Detection: Models 55CF and 70CF

Dollar Value

Accumulation: Model 70CF

Density Setting:

*Automatic Comparison
*Three Operator Selectable Ranges
*Eight Internally Selectable Ranges

Auto diagnostics:

*Static Test mode for Technical Maintenance, Active Test Mode for currency evaluation

Interfaces: (Option)

*Standard Interface to Magner Cash Settlement
*RS232 Interface

Magner Model 35

Counting Speed: 1000 notes per minute

Document Size Limits and Feed Mechanism: Same as 55

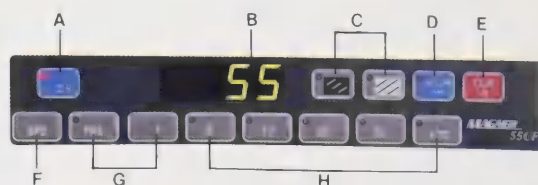

Physical Dimensions: Same as 55

Power Source: 110V 60 Hz

Magner Models 55/55CF/70CF

Standard Features

Large LED display, touch sensitive controls, automatic start, and Grand Total accumulation insure simplicity of operation and maximum productivity. Variable speed selections of 600/1000/1300 notes per minute, feed path accessible through rear door and thumb wheel thickness control. Automatic or operator selectable density ranges for smooth counting of dark colored and mutilated documents.

[illegible]

A New Cash Settlement System *Magner's 3001 Cash Settlement System is the result of significant advances in money processing hardware and software technology. And these advances are a direct response to your cash settlement needs.*

You need a system that's easy to learn and operate. A system with the power and speed to dramatically improve productivity. And an elegant terminal that fits easily into any workspace. All at a low price. The 3001 delivers — with simplicity of design and operation, greater power, a compact profile and a price that's half of what you would expect to pay. Plus one more important feature: the capability to support other devices in a total money processing system.

So whether you're taking the next step to an integrated system or planning enhancements to existing capabilities, Magner can help you create a more productive, more efficient money processing environment.

MAGNER

Choice of Preset Programs The 3001 Cash Settlement System offers preset programs designed for the Financial, Retail, Vending and Transportation industries. Other programs are also available.

Financial

For financial applications, the 3001 terminal with a validating printer offers validation of all control documents with date, teller numbers and amount. The financial program also provides cash summaries and balances all money to the declared amount of the deposit. The system produces process time and total dollar values by account number to ensure accurate customer billing. And for greater security, the program is supervisor key-controlled for deposits requiring adjustments.

Retail

The retail program automatically produces a list of payment categories, eliminating time-consuming reverification of check and charge card transactions. The balancing function assures accurate processing of registers, while other special functions adapt the program to your particular requirements. For example, change funds can be handled in several ways, according to the needs of your individual stores. Screen prompts can be customized to reduce training time and facilitate store audits. The 3001 can also be interfaced to an encoder to complete your daily settlement.

Vending

The 3001 breaks new ground with affordable cash settlement for the vending industry. The system can track cash amounts by route and machine. Interfaced with Magner Coin Sorters, the system enables automatic data capture of all cash amounts by denomination. You can also download all settlement data into your PC to track information.

Transportation

Through an interface to a Magner Coin Sorter, the 3001 serves transportation applications with automatic capture of all coin denomination totals by route. An accurate audit trail shows any adjustments to currency and coin, and prints them in red for added security. Custom interfaces are also available.

Coin Sorter and
The Model 25 Cur-
rency Counter.**

A Systems Approach *Because we take an integrated approach to money processing, all of Magnet's stand-alone products are designed for a smooth transition into our systems. When you buy our 3001 Cash Settlement Terminal, for example, you get the best possible solution for your present needs. And you also take the first step toward a total money processing system. But your operation need not be large or complex to benefit from automation. Like our Magnet system, PC-based systems offer some key advantages to smaller financial operations whose money processing needs are focused on deposit consolidation. These systems can receive deposit data from many individual terminals, consolidating and translating the information into meaningful management reports. Your Magnet distributor will help you choose the right system to fit your needs.*

Any application can benefit from better information, just as it can benefit from higher productivity. Magnet makes both possible.

Contact your local Magnet distributor.

MAGNER

Hardware Specifications

Display: 40-character, alpha-numeric Liquid Crystal Display

SUPERSCAN™

THE ULTIMATE MONEY DETECTION SYSTEM

Model 2100

SOPHISTICATED, ACCURATE, AFFORDABLE

SUPERSCAN™

CASHSCAN®, the pioneer in State of the Art Currency Scanning Technology introduces important advances in counterfeit detection.

Nothing compares to Superscan:

ACCURACY:

Superscan's unique technology makes it extremely accurate and reliable in counterfeit detection. Superscan employs OCR (Optical Scanning Recognition), which identifies the denomination of the inserted bill and confirms its authenticity.

SIMPLICITY:

Superscan is quick and easy to operate. Just insert the bill. You'll know in a second if the bill is genuine or counterfeit.

INGENUITY:

Superscan displays digitally:

- ★ Denomination of each bill,
- ★ Quantity of authentic bills,
- ★ Total Dollar Amount.

CONVENIENCE:

- ★ Superscan is sleek and compact;
- ★ Operates on 110/220 volts—Use it anywhere!
- ★ Super technology at an affordable price
- ★ One Year Warranty

Superscan is the most accurate cash scanning device on the market!

XTRACOVER

Tellermate needs no on-site maintenance, is highly reliable, easy to use and covered by a 12 month parts and labour warranty. Our XTRACOVER Schemes provide an expert telephone help-line, rapid exchange of equipment in the event of a fault, even accidental, and assurance that you will always be kept up-to-date when new coins or notes are introduced. Most users sign up for XTRACOVER because it provides complete, hassle-free service.

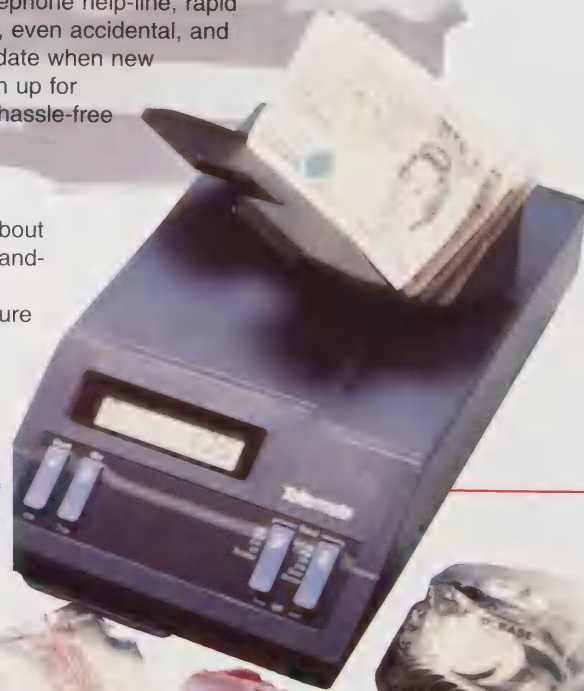

SYSTEMS

If you need more than money counting, ask about PERCELL SYSTEMS. We offer a range of stand-alone and computer controlled solutions to cashroom requirements in banking, retail, leisure and government, from single workstations to multi-user networks.

There's a Tellermate for your business!

Tellermate

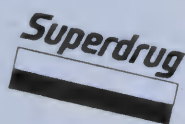

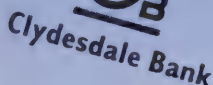

TO COUNT YOUR MONEY AND MORE!

Banks trust Tellermate at customer windows and behind the scenes.
Retailers rely on Tellermate for till checks and bank deposits.
Forecourt Retailers, Sub-Postmasters, Restaurants, Traders, Public Utilities, Schools, Prisons,
all work better with Tellermate.

- Spend time counting money, coupons, tickets?
- Customers waiting for cashier service?
- Wonder if cash deliveries are always correct?
- Problems with shrinkage, reports, audit trails?

There's a
Tellermate
for your business!

Tellermate FX130, FX132

Cash & Payment Controllers

- Turns the world's leading note and coin counter into the smallest, fastest and best value transaction processing system.
- Three times faster than counting cash by hand, and using a calculator for cheques and cards. There are fewer errors and you will be able to read the results on a single printout.
- Processes cash faster and as accurately as friction counters with computers. But it takes a fraction of the space, makes a fraction of the noise and, being virtually maintenance free, it's a fraction of the cost.

FX130

DATE: 03-02-91	TIME: 14:54

3 x Visa	251.87*
Total	6192.74*

As well as counting loose and packed banknotes and coins, you can enter cheques, credit cards and vouchers, foreign currency and other items. Each transaction is logged and the printer reports just the information you need, in the detail you choose, including each transaction and the total of all transactions in a working period.

QUALITY COUNTS

Tellermate is designed and built in our UK factory under tight quality controls. It is constructed for years of active service in the tough financial environment.

XTRACOVER

The best customer care service available operates on a subscription basis to supplement our generous warranty terms. Includes a full "help line" facility.

The Cashroom Controller posts entries as credits or debits and links each payment with any of 90 departments or cash registers, as well as any of 99 employees. You can check any of their takings, broken out by denomination. You can make up floats or prepare your bank deposit and have a complete record of where all your cash came from and where it went.

TECHNICAL DETAILS

Money	25 notes or any standard note bundle per second.
Counting Speed:	100 coins or any standard bag or roll of coin per second.
Capacity:	FX132 stores 150 transactions or 3000 non-cash entries before having to reset the Total Register. FX130 registers Total Cash to 999999.99 (or 8 digits).
Space Requirements:	The complete system, including printer, occupies less than two of these leaflets and weighs under 5Kg.
Power and Safety:	Operates for 1 hour from internal rechargeable batteries or can be permanently connected to AC power. Satisfies all relevant FCC and FCC safety and interference regulations.
